CAREER OBJECTIVE

Computer Science and Engineering student at AIUB who builds secure, well-tested full-stack web applications, with hands-on experience in ASP.NET Core, Entity Framework Core, SQL Server and Java. Seeking an opportunity to apply strong skills in software development, testing and data analysis while delivering reliable and impactful results.

TECHNICAL SKILLS

Languages:	C#, Java, C++, Python, JavaScript, TypeScript, PHP, SQL, HTML, CSS
Backend:	ASP.NET Core (MVC, Web API), EF Core, ASP.NET Core Identity, .NET Framework, Node.js, NestJS, REST APIs
Frontend:	React.js, Next.js, Razor, Tailwind CSS, Bootstrap 5
Desktop:	Java Swing
Databases:	SQL Server (SSMS), MySQL, PostgreSQL, SQLite
Testing & QA:	Unit & Integration Testing, Playwright (E2E), pytest, Vitest
Version Control & CI:	Git, GitHub, GitHub Actions

PROJECTS

ProjectFlow *(C#, ASP.NET Core MVC, Web API, EF Core, SQL Server)* GitHub →

- Built a project and task workspace with organizations, projects, tasks, Kanban and table views.
- Designed a layered architecture where MVC pages and the REST API share the same services.
- Implemented 3 user roles with ASP.NET Core Identity, account lockout, IP limits and secure sessions.
- Added dashboards, deadline reminders, in-app notifications, task comments and CSV reports.
- Automated unit, integration and Playwright browser tests in GitHub Actions on SQL Server.

Q-Billiard Shop *(Java, Java Swing)* GitHub →

- Developed a desktop shop for billiard equipment with separate user and admin login.
- Built a product catalog, a custom cue builder and payment screens for bKash, Nagad and cards.
- Stored user, admin and order data using Java file handling.

Hospital Appointment System *(PHP, MySQL, HTML, CSS, JavaScript)* GitHub →

- Developed patient sign-up, appointment booking by doctor and specialization, and dashboards.
- Structured the application in MVC with a service layer and environment-based configuration.
- Collaborated in a 4-member team using feature branches and pull requests.

Solar System Simulation *(C++, OpenGL)* GitHub →

- Built an interactive 3D solar system with planetary orbits, camera controls and lighting effects.

EDUCATION

American International University-Bangladesh (AIUB) Dhaka, Bangladesh

Bachelor of Science in Computer Science & Engineering
Coursework: Algorithms, Databases, OOP, Software Engineering, Computer Networks, Advanced Programming with .NET, Advanced Programming in Web Technologies, SQAT

RESEARCH & ACTIVITIES

Research Project *4-member team* GitHub →

Unnoticed Disclosure: Readers Do Not Register AI Source Labels on De-Influencing Content

- Ran a between-subjects experiment with 183 valid participants on AI disclosure labels.
- Found only 50.8% of readers noticed the AI source label, a rate no better than chance.
- Analyzed data in Python (pandas, SciPy, scikit-learn); models predicted trust with cross-validated $R^2 = 0.578$ and anti-consumption behaviour with AUC 0.879.

LEADERSHIP

- **Thesis Team Lead:** Coordinated a 4-member thesis team, planning the study, dividing the analysis work and reviewing the final paper.
- **Academic Project Lead:** Managed team projects in .NET Development and Web Technologies by splitting tasks, tracking progress and integrating each member's work before submission.

CERTIFICATIONS & WORKSHOPS

- **AI Engineering Bootcamp** – Ostad, 2025
